

Java

```
class Solution {  
    public long maxProfit(int[] workers, int[][] tasks) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number[]} workers  
 * @param {number[][]} tasks  
 * @return {number}  
 */  
var maxProfit = function(workers, tasks) {  
  
};
```

TypeScript

```
function maxProfit(workers: number[], tasks: number[][]): number {  
  
};
```

C++

```
class Solution {
```

```
public:
    long long maxProfit(vector<int>& workers, vector<vector<int>>& tasks) {

    }
};
```

C#

```
public class Solution {
    public long MaxProfit(int[] workers, int[][] tasks) {

    }
}
```

Kotlin

```
class Solution {
    fun maxProfit(workers: IntArray, tasks: Array<IntArray>): Long {

    }
}
```

Go

```
func maxProfit(workers []int, tasks [][]int) int64 {

}
```
